functional requirements summary, PDB-1

OBJECTIVE

The objective of this project is to reduce energy consumption in 203 buildings by providing a new EMCS (Energy Monitoring Control System) to control and monitor systems.

REQUIREMENTS

Of the 203 buildings on the new EMCS, 45 buildings are currently controlled and monitored by an existing EMCS. The existing hardware in the 45 buildings shall be replaced, but the fiber optic (FO) cable to the hardware should be retained. The new EMCS shall include 158 additional buildings. The new EMCS should consist of new PC-based front-end computers communicating to building Remote Control Units, Auxiliary Control Units, and Unitary Control Units. There are 3,826 EMCS points in the 158 additional buildings. A new data transmission system, consisting of contractor-installed aerial and underground FO cable shall be provided for all data communication needs to the 158 buildings.

The EMCS configuration shall be based on the Huntsville Division Corps of Engineers current draft guide specifications. These specifications include the following main components:

- PC-based front-end computers, specified to be the fastest available microprocessor at the time (currently an Intel 80486-66 MHz).
- Remote Control Units (RCU), microprocessor-based field panels which coordinate communications and some high level control coordination with ACUs and UCUs. There is typically one RCU per 64 ACUs and UCUs.
- Auxiliary Control Units (ACU), microprocessor-based panels set up to control and monitor single pieces of equipment, or groups of equipment. ACUs are typically used for large systems.
- Unitary Control Units (UCU), microprocessor-based panels set up to control and monitor single pieces of equipment, or groups of equipment. UCUs are typically used for terminal devices (such as variable air volume boxes) and fan coils.
- Central Operator Station (COS), is the site where the front-end computers are located and the system operator technician operates the EMCS.
- Communication Processor and Communication Network Interface, provide the interface and management of the networks. Different networks could exist between COSs, between the COS and RCUs, and between RCUs, ACUs, and UCUs.

The data transmission media (DTM) shall be FO cable. The existing EMCS utilizes fiber optic DTM. The Johnson Controls EMCS which preceded the current EMCS was turned off and removed because the coaxial communication system was prone to lightning strikes. Fort Leonard Wood is in a high lightning area of the United States.

functional requirements summary, PDB-1

REQUIREMENTS (continued)

Sensors and actuators shall be provided to monitor and control the remote points of the EMCS. The sensors should include, but not be limited to the following:

- Temperature sensors with transmitters
- Relative humidity sensors with transmitters
- Pressure sensors
- Pressure switches
- Watt meters
- Amp meters
- Flow meters
- Current transformers
- Status relays
- Start/stop control relays
- Electric/pneumatic transducers
- Pneumatic/electric transmitters.

The EMCS at Fort Leonard Wood is operated and maintained by the EMCS manager and the system operator technician. No major maintenance or calibration work would be done by this staff. The staff, however, should be able to troubleshoot, exchange defective boards on computer-based hardware, and perform similar tasks. Two additional EMCS operators should be provided to operate the EMCS.

Correct and continuing maintenance of EMCS equipment is essential if the maximum benefits of the system are to be realized. Without proper maintenance, the reliability of an EMCS will rapidly deteriorate, thereby reducing its energy conservation capability and benefits.

functional requirements summary, PDB-1

A. SPECIAL CONSIDERATIONS

| ITEM | | Required or Not Required | To Be * Determined | Comment Attached | Document Attached |
|--|--|--------------------------|--------------------|------------------|-------------------|
| A-1 | Cost estimates for each primary and supporting facility | R | | ✓ | |
| A-2 | Telecommunications system coordination with USACC and authorization for exceptions | NR | | | |
| A-3 | Coordination with state and local governmental requirements (blind vendors, medical facilities, construction and operating permits, clearinghouse coordination, etc.) | NR | | | |
| A-4 | Assignment of airspace | NR | | | |
| A-5 | Economic analysis of alternatives | R | | ✓ | |
| A-6 | Approval for new starts | NR | | | |
| A-7 | International balance of payments (IBOP) coordination with U.S. European command and NATO—overseas cost estimates and comparables (include rate of exchange used in estimates) | NR | | | |
| A-8 | Impact on historic places—on site survey by authorized archeologist and coordination with state historic preservation officer and advisory council on historic preservation | NR | | | |
| A-9 | Exceptions to established criteria | NR | | | |
| A-10 | Coordination with various staff agencies (Provost Marshall-physical security, etc.) | R | | ✓ | |
| A-11 | Identification of related or support projects (so projects can be coordinated) | R | P | | |
| A-12 | Required completion date | R | A | | |
| Other Special Considerations (List and number items) | | | | | |

COMMENTS

DOCUMENTATION CHECKLIST

| Item | Comments |
|------|--|
| A-1 | See the cost estimates in Part 3, "Economic Analysis". |
| A-5 | Alternatives to the EMCS in relation to the energy conservation project were considered as a part of the study. |
| A-10 | Scheduling and clearances for access to permanent buildings must be considered. |
| C-2 | Evaluations concerning the thermal characteristics of the subject facilities were completed as an integral part of the energy study. |
| C-18 | Deficiencies in efficient energy consumption have been identified and corrections have been proposed. |
| C-19 | Alternatives to the EMCS with respect to the energy study were considered. |
| C-20 | The scope of work will not affect accessibility of the handicapped. |
| C-21 | As-built drawings for project facilities are available for check-out and reproduction from DEH. |
| D-2 | The Energy Requirements Appraisal was completed and included in Part 3. |
| D-3 | Implementation of this project will result in reduced energy consumption. |
| D-5 | Evaluations concerning the existing EMCS and a proposed EMCS were completed as an integral part of the energy study. |

| 1. COMPONENT ARMY | FY 1995 MILITARY CONSTRUCTION PROJECT DATA | 2. DATE 27 DEC 93 |
| 3. INSTALLATION AND LOCATION Fort Leonard Wood, Missouri | | |
| 4. PROJECT TITLE ECIP Expansion of Existing EMCS (Energy Monitoring Control System) | | 5. PROJECT NUMBER |
| 11. REQUIREMENT PROJECT: Expand the existing EMCS to include 158 additional buildings. Provide PC-based front-end computers, Central Operator Station, Communication Processor and Network Interface, Remote Control Units, Auxiliary Control Units, Unitary Control Units, sensors, and actuators. Replace field hardware in 45 buildings on the existing EMCS and retain fiber optic (FO) cable to these buildings. Provide FO cable to the 158 additional buildings. Provide two additional EMCS operators for the EMCS. REQUIREMENT: This project is required to reduce the fuel oil consumption, LPG consumption, electrical consumption, and electrical demand of HVAC equipment, boilers, chillers, and electric domestic hot water heaters through EMCS control technology. CURRENT SITUATION: Fort Leonard Wood has an existing EMCS in 45 buildings. The final construction and acceptance of this EMCS was completed in the summer of 1991. The EMCS configuration includes dual Digital Equipment Corporation (DEC) MicroVax 3100 minicomputers, three DEC VaxStation 3100's with 19" color monitors, plus peripherals and a failover controller. Six FO data transmission cables facilitate the communications from the master control room to the buildings. Discussions with the EMCS operators at Fort Leonard Wood regarding the existing EMCS indicated the system was operational and was providing them significant utility savings (especially through electrical demand limiting). The discussions also revealed some problems and defects associated with the existing EMCS. | | |

| | | |
|---|--|----------------------|
| 1. COMPONENT ARMY | FY 1995 MILITARY CONSTRUCTION PROJECT DATA | 2. DATE 27 DEC 93 |
| 3. INSTALLATION AND LOCATION Fort Leonard Wood, Missouri | | |
| 4. PROJECT TITLE ECIP Expansion of Existing EMCS (Energy Monitoring Control System) | | 5. PROJECT NUMBER |
| <p>IMPACT IF NOT PROVIDED:</p> <p>If this project is not funded, a reduction of 195,777 MBtu/yr cannot be achieved. Excessive amounts of fuel oil, LPG, natural gas and electricity will continue to be used, and there will be no contribution to energy reduction goals established for U.S. Army facilities by Army Headquarters.</p> <p>ADDITIONAL:</p> <p>This project complies with the scope and design criteria of the "Energy Conservation Investment Program (ECIP) Guidance". The project has a Savings to Investment Ratio (SIR) of 3.0 and a simple payback of 3.2 years. The implementation of this project will provide an annual energy savings of 195,777 MBtu and an annual total dollar savings of \$1,037,666.</p> <p>Project validation will be through the use of electric and gas meters on the existing utilities to record consumption basewide.</p> | | |

PART 3
SUPPORTING DATA

Date: December 1993
Project Number:
Project Title: ECIP Expansion of Existing EMCS (Energy Monitoring Control System)

PROGRAMMING DOCUMENTATION

Supporting Data

Method of Analysis:

A series of computer programs and analysis techniques were used to select the buildings, systems, and functions which would provide an optimum EMCS configuration for Fort Leonard Wood. This main analysis program, written by EMC Engineers, Inc., calculates the energy savings which result when a particular EMCS function is applied to a specific mechanical system type. Savings are calculated on a function-by-function basis for each system. Typical system configurations were developed for a range of AHUs, pumps, boilers, and chillers. The calculations follow the basic guidelines described in "CR82.030, Standardized EMCS Energy Savings Calculations, Naval Civil Engineering Laboratory".

Energy savings were calculated using energy constants derived by computer energy simulations of representative buildings and weather conditions at Fort Leonard Wood. The TRACE and BEACON computer programs were used to execute the computer energy simulations. Both programs perform hourly energy calculations and can predict the energy consumption which would result from various heating and cooling systems and operational settings. The energy savings for the buildings not simulated were extrapolated using the energy constants derived for the representative buildings.

The functions provided in the analysis program include:

- Scheduled start/stop
- Optimum start/stop
- Duty cycling
- Demand start/stop of motors
- Demand start/stop of chillers
- Economizer
- Direct digital control
- Unoccupied setback
- Hot water outside air reset
- Chilled water temperature reset
- Ventilation/recirculation damper control.

The analysis computer program also developed the I/O summary table for the proposed functions for each system, estimated the cost for the hardware to implement the functions, and split the cost between function groups. Savings and costs computed by the analysis program were then entered into the spreadsheet program to calculate the economics for various functions.

The spreadsheet program has special features which allow calculations, selection of items, sorting, and prioritization of items. This system was used for the following purposes:

- To perform economic analyses on EMCS functions, systems, and buildings.
- To sort data on the benefits provided by the EMCS to obtain the optimum system.

Based on the final selection of functions, systems, and buildings, the total savings and costs were developed into an EMCS project.

Date: December 1993
Project Number:
Project Title: ECIP Expansion of Existing EMCS (Energy Monitoring Control System)

PROGRAMMING DOCUMENTATION
Supporting Data

Assumptions:

Electric cost = \$0.025/kWh

Electric demand cost = \$6.185/kW/month

No. 2 fuel oil cost = \$5.4398/MBtu

No. 6 fuel oil cost = \$4.4312/MBtu

Liquified petroleum gas cost = \$5.6305/MBtu

Calculations:

$$\begin{aligned}\text{Annual Recurring Cost} &= \text{Annual Maintenance Manhours Savings} + \text{Annual Electrical Demand Savings} + (\text{Annual Staff Cost}) + (\text{Annual Maintenance Cost}) \\ &= \$58,644 + \$38,118 + (\$66,000) + (\$114,533) \\ &= (\$83,771)\end{aligned}$$

Economic Analysis:

**TABLE 3-1
ECONOMIC SUMMARY**

| Project | Annual Energy Savings (MBtu/yr) | Total Annual Cost Savings (\$/yr) | Simple Payback (yrs) | SIR |
|--|---------------------------------|-----------------------------------|----------------------|-----|
| ECIP Expansion of Existing EMCS (Energy Monitoring Control System) | 195,777 | 1,037,666 | 3.2 | 3.0 |

The Life Cycle Cost Analysis (LCCA) for the ECIP project is presented on page 3-3. The economic summary for the 158 additional buildings on the EMCS is presented in Table 3-2 beginning on page 3-4.
